With early detection and clean lymph nodes, the five year survival rate is almost 100%.

Genius 3D mammography detects 41% more invasive breast cancers and reduces false positives by up to 40%.

8 out of 9 diagnosed women have no family history of breast cancer.

Since 2011, almost 8 million women have benefited from Genius 3D mammography.

A woman's chance of developing breast cancer in her lifetime is 1 in 8.

Early detection is genius.

Genius 3D mammography available as Hologic Selenia® Dimensions® 3D system. Please consult your physician for a complete list of benefits and risks associated with mammography.
Genius 3D mammography™
Frequently Asked Questions

What should I expect during the Genius 3D mammography exam?

A Genius 3D mammography exam is very similar to having a traditional 2D mammogram. Like a 2D mammogram, the technologist will position you, compress your breast, and take images from different angles.

There’s no additional compression required with Genius 3D mammography, and it only takes a few seconds longer for each view.

The technologist will view the images of your breasts at the computer workstation to ensure quality images have been captured for review. A radiologist will then examine the images and report results to either your physician or directly to you.

Who can have a Genius 3D mammography exam?

Genius 3D mammography is approved for all women who would be undergoing a standard mammogram.

Multiple clinical studies show that all women, regardless of breast type or density, benefit from 3D mammography.

What is the difference between a screening and a diagnostic mammogram?

A screening mammogram is your annual mammogram that is done every year.

Sometimes, the radiologist may ask you to come back for follow-up images, called a diagnostic mammogram, to rule out an unclear area in the breast, or if there is a breast complaint that needs to be evaluated.

Please call our office to schedule your annual Genius 3D mammography screening exam.

Why Genius 3D mammography?

Genius 3D mammography detects 41% more invasive breast cancers and reduces false positives by up to 40%. This means one simple thing: early detection.

Genius 3D mammography is the first and only clinically superior 3D mammography approved by the FDA.

Genius 3D mammography allows doctors to see masses and distortions associated with cancers and precancerous cells significantly more clearly than conventional 2D mammography. Instead of viewing all of the complexities of your breast tissue in a flat image, as with traditional 2D mammography, fine details are more visible and no longer hidden by the tissue above or below.
